

Compressed Air Management
Specialists

Atlas Copco

Authorised Distributor

- #airCHECK
- Energy Audit
- Saving Money

How can we save you money?

Detection of air leaks
Reduction in working pressure
Wasted "Off" Load Energy
No Loss autodrains
Receiver and pipework sizing
Multiple compressor control

*Air compressors typically consume from 10-12% of a factory's electricity, sometimes up to 30%. Making even small changes as a result of ACL Engineering's Free #airCHECK assessment can be enough to offer **long-term financial savings** and decrease your production costs.*

#airCHECK can be carried out without any disruption to your production, in as little as 10 minutes. Our engineer makes a visual inspection of your entire compressed air system, from air compressor to point of use, all of the ancillary equipment along the line and even the compressor room environment. Equipment is checked for condition, appropriate capacity, ISO compliance, unproductive running and for air leaks, to name but a few areas.

Contact us today to book your #airCHECK
